1. Current plan catalog

All listed prices are invented USD monthly base charges. Essential 100 offers up to 100 Mbps download and 100 Mbps upload for $39/month. Everyday 300 offers up to 300 Mbps download and 300 Mbps upload for $59/month. Home 600 offers up to 600 Mbps download and 600 Mbps upload for $79/month. Gig 1000 offers up to 1000 Mbps download and 1000 Mbps upload for $99/month. These are residential fiber plans, subject to address qualification. No promotional discount, mobile bundle, television package, or fixed-term contract is included in this catalog.

2. Charges and equipment included

Standard installation is a one-time $49 charge for an eligible existing residential fiber route and ordinary indoor termination. Any nonstandard work requires a separate itemized quote accepted before work begins. One NovaFiber ONT and one Wi-Fi router are loaned without monthly rental; ownership remains with NovaFiber. Government-imposed taxes, if applicable, appear separately on the invoice; the corpus does not define a local tax rate. There is no additional standard activation fee, residential data cap, or standard early termination fee.

3. Speed and service qualifications

Plan rates are up to Mbps measured at the service connection; Wi-Fi performance varies with radio conditions and device capability. A 1 Gbps Ethernet link can yield about 940 Mbps of application throughput because of overhead. NovaFiber does not promise identical wired and wireless results or a contractual 70% minimum. The 70% threshold in NF-TS-003 is only a diagnostic trigger. Plans do not include a dedicated business circuit, guaranteed uptime, managed security, or a public static IP address.

4. Billing and fair service use

Subscriptions are month-to-month and billed in advance from the service activation date. The billing cycle follows that activation-day anniversary, using the last day of a month when the anniversary day does not exist. The invoice is due seven calendar days after issue. There is no prepaid recharge expiry process; customers pay invoices, not arbitrary day-based recharge packs. Lawful household use has no volume cap. Network abuse or a security incident may require a separate investigation under NF-BP-004; heavy lawful use alone is not grounds for an invented data-cap charge.

5. Plan changes

An authenticated account holder may request a plan change through the account portal or verified support. Upgrades, if supported at the address, take effect after confirmation, normally within one business day, with a prorated difference for the remaining cycle. Downgrades take effect at the next billing-cycle start with no mid-cycle downgrade refund. No standard plan-change administration fee applies. See NF-GF-001 for verification and examples. Nova cannot alter a plan or confirm a customer's current subscription.

6. Other policies and exceptions

Use NF-BP-002 for payment processing and disputes, NF-BP-003 for cancellation/refunds/equipment returns, NF-GF-002 for relocation, and NF-GF-003 for service qualification and first installation. Final qualification, tax treatment, any nonstandard work, and appointment availability must be confirmed for the specific address. Do not fabricate coverage, a discounted price, or a service guarantee from this general catalog.
